Professional Summary

Full-Stack Software Engineer experienced in fintech and loan-origination workflows, third-party integrations, asynchronous APIs, and relational data processing. Builds React interfaces and Python/Node.js backends, with additional project experience in computer vision and satellite-image analysis.

Experience

UPTIQ.ai **Jul 2026 – Present**

Software Development Engineer

- Develop and extend multi-party Loan Origination System (LOS) workflows for co-borrowers and corporate guarantors, including KYC/KYB verification, ownership-stake checks, and dynamic form validation.
- Integrate financial and identity providers including Plaid, Finicity, Middesk, and Sumsub; implement asynchronous webhook handling and idempotent database upserts for reliable processing of repeated events.
- Implement debt-to-income (DTI), liability, and net-worth calculations; integrate TValue for loan amortization schedules and J.D. Power valuation endpoints for asset-equity assessment.
- Automate compliance checks involving Cobalt services for OFAC, UCC, and Secretary of State records, and use the U.S. Census Geocoder for census-tract mapping and CRA-related reporting.
- Address security risks in lending APIs, including stored cross-site scripting (XSS), SQL injection, and broken object-level authorization (BOLA).

UPTIQ.ai **Jan 2026 – Jun 2026**

Software Development Engineer Intern

- Built reusable, state-managed React components and validation flows for commercial onboarding, supporting consistent form behavior and preventing incomplete submissions.
- Developed REST API endpoints in Node.js and Python to ingest, parse, and normalize third-party data into relational schemas used in credit-decisioning workflows.
- Implemented unit and integration tests for underwriting modules to validate business logic and help prevent regressions.

Projects

Crowd Sync – Fleet Telemetry and Occupancy Monitoring

React.js, Node.js, Express.js, Socket.IO, PostgreSQL, Redis, Python, YOLOv8, OpenCV, Leaflet.js

- Built a fleet-monitoring application combining live GPS telemetry and computer vision to visualize vehicle locations and estimate passenger occupancy.
- Implemented a real-time event pipeline with Socket.IO and Redis Pub/Sub to deliver bus-coordinate updates to a Leaflet.js tracking dashboard.
- Integrated YOLOv8 and OpenCV for camera-frame processing, passenger-count estimation, and occupancy-based alerts.
- Developed PostgreSQL spatial queries for vehicle ETA calculations, transit-stop geofencing, and historical route analysis.

Satellite Vision – Land-Transformation Analysis

Python, FastAPI, TensorFlow, Keras, OpenCV, NumPy, MongoDB, React

- Developed a satellite-image classification and change-detection pipeline using a CNN trained on an eight-class EuroSAT dataset to analyze land-cover categories.
- Implemented overlapping 64×64 image-window processing with 50% stride and confidence-weighted tile stitching to reduce boundary artifacts in generated predictions.
- Built asynchronous FastAPI endpoints to process image tiles and deliver classification masks to a React-based interface.

Technical Skills

Languages: C++, Python, JavaScript (ES6+), TypeScript, Java, SQL, HTML5, CSS3
Backend: Node.js, Express.js, FastAPI, Flask, REST APIs, WebSockets, Socket.IO, JWT, OAuth 2.0
Frontend: React.js, Next.js, Redux Toolkit, Tailwind CSS, Leaflet.js, Vite
Databases: PostgreSQL, MongoDB, MySQL, Redis (Pub/Sub, caching)
Fintech Integrations: Plaid, Finicity, Middesk, Sumsub, TValue, J.D. Power, Census Geocoder, Cobalt
ML and Computer Vision: YOLOv8, OpenCV, TensorFlow, Keras, Scikit-learn, NumPy
Tools: Git, GitHub, Docker, Postman, Linux, Vercel

Education

Walchand College of Engineering, Sangli **2022 – 2026**

B.Tech. in Computer Science and Engineering *CGPA: 8.34/10*

Relevant Coursework: Data Structures and Algorithms, Operating Systems, DBMS, Computer Networks, Object-Oriented Design, Distributed Systems, Machine Learning

Achievements

- Solved 300+ problems across LeetCode, CodeChef, and GeeksforGeeks, practicing data structures, graph algorithms, and dynamic programming.
